Dyscalculia or Maths Learning Difficulties?

Dyscalculia
a SpLD whose core
feature is a problem
with sense of
number

Other SpLDs
which do not include
a problem with sense
of number but which
may have an impact
upon mathematics
learning

Maths learning
difficulties arising
from lack of
appropriate teaching,
environmental
factors or other
medical conditions

Dyscalculia

Dyscalculia is a specific and persistent **difficulty in understanding numbers** which can lead to a diverse range of difficulties with mathematics. It will be **unexpected in relation to age, level of education and experience** and **occurs across all ages and abilities**.

Mathematics difficulties are best thought of as a **continuum**, not a distinct category, and they **have many causal factors**. **Dyscalculia falls at one end of the spectrum** and will be distinguishable from other mathematics issues due to the **severity of difficulties with number sense, including subitising, symbolic and non-symbolic magnitude comparison, and ordering**. It can occur singly but can also **co-occur with other specific learning difficulties**, mathematics anxiety and medical conditions.
